

# BROWSE REPORTER

CODEWORK  
Reporting Tool for Monitoring Web Browsing Activity

BrowseReporter is a powerful **web-monitoring** tool that tracks the browsing activity of your employees or students. It is a **non-intrusive** tool, running in the background without the users knowing that their systems are being monitored.

BrowseReporter captures the URLs of every visited website through Internet Explorer or Firefox. Reporting is available at the executive level, which can further be drilled down to the lowest detail.

- Monitor the URLs visited by user or by PC.
- Track the browsing activity on charts or reports
- Monitor in stealth mode

**FREE 30 DAY TRIAL**

- **Exclusion List: New**  
The Exclusion List allows the administrator to remove irrelevant URLs from the final report.
- **Set Idle Time Limit: New**  
Web activities that are perceived to be inactive or idle can now be left out of the final report.
- **Remote Installation of Clients: New**  
BrowseReporter Clients can be installed remotely from the Console, eliminating the need to visit individual Client PCs.
- **Firefox Compatibility: New**  
In addition to tracking web activity on Internet Explorer, BrowseReporter can now track activity on Mozilla Firefox as well.

### Top 10 Domains By Browsing Time(PCs)

Date Range: 06/02/2007 To 06/02/2007
